Book of
Abstract

10.00 – 10.30	Opening	
10.30 – 11.00	V.V. Korenkov <i>Welcome from LIT, JINR</i>	
11.00 – 11.30	<i>Welcome from Keldysh Institute of Applied Mathematics RAS</i>	
11.30 – 12.00	<i>Coffee</i>	
12.00-12.30	A. Bogdanov, E. Stankova, V. Mareev Functional integration as a tool for mathematical modelling and high performance algorithms creation	57
12.30-13.00	V. Friese Computing in the CBM experiment: problems and challenges	
13.00-13.30	I. Kisel Data processing in HEP on multicore computer architectures	
13.30 – 15.00	<i>LUNCH</i>	

Monday, 8.07**Section 1a***Mathematical methods and tools for modeling complex systems***Room 407**

15.00 – 15.15	Gh. Adam, S. Adam Sharpening local error estimates using redundancy in Bayesian automatic adaptive quadrature	23
15.15 – 15.30	E.A. Ayryan, V. Malyutin Application of functional polynomials to approximation of matrix-valued functional integrals	41
15.30 – 15.45	N. Bogdanova, S. Todorov New approximation results for data with errors in both variables	55
15.45 – 16.00	A.V. Bogdanov, V.V. Mareev Quasiclassical methods for perturbed KDVB equation	56
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	A.D. Egorov Evaluation of expectations of random functionals	75
16.45 – 17.00	N.M. Glazunov Calabi-Yau-type varieties over fields of finite characteristics and their applications	86
17.00 – 17.15	А.С. Гольдич Краевые задачи с уравнением Грэда-Шафранова в моделировании магнитных ловушек	88
17.15 – 17.30	N. Kolkovska Finite difference schemes for Boussinesq equation	103

17.30 – 17.45	E. Marushkina Local dynamics of a pair of FitzHugh-Nagumo oscillators with asymmetric interaction	126
17.45 – 18.00	A. Oprea, S. Adam, Gh. Adam Scrutiny of some data sets concerning the cuprate superconductivity under selective copper substitution with metallic ions	140
18.00 – 18.15	K.A. Lyakhov and H.J. Lee New iterative two-cycle scheme of boron isotopes separation by the laser assisted retardation of condensation method	
19.00	<i>Welcome party (ICH)</i>	

Monday, 8.07

Section 1b

Mathematical methods and tools for modeling complex systems

Room 310

15.00 – 15.15	A.A. Abramov, L.F. Yukhno Calculation of the Painleve transcendents	
15.15 – 15.30	S.I. Bitjukov, N.V. Krasnikov, A.N. Nikitenko, V.V. Smirnova A method for statistical comparison of histograms	52
15.30 – 15.45	А.Б. Дегтярев, В.Н. Храмушин Особенности построения вычислительных экспериментов в гидромеханике с использованием явных численных схем функциональных алгоритмов тензорной математики	66
15.45 – 16.00	A.V. Demidova, A.V. Korolkova, D.S. Kulyabov, L.A. Sevasyanov The method of stochastization of one-step processes	67
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	A. Ermilov Modeling of speech features via simulated annealing algorithm	76
16.45 – 17.00	I.M. Gostev About singularity of calculating a higher orders derivative at identification of the form of graphic objects	89
17.00 – 17.15	I.M. Gostev, E.A. Sibirtseva About one model of computer control on the basis of gaze tracking	90
17.15 – 17.30	A.M. Karavaev, S.N. Perepechko Dimer problem on cylinders: recurrences and generating functions	98
17.30 – 17.45	A.V. Kryanev, D.K. Udumyan, G.V. Lukin, V.V. Ivanov Separation of the deterministic components and forecasting of time processes	110
17.45 – 18.00	I.M. Nikolsky Numerical investigation of IWZ(k) preconditioner	139
18.00 – 18.15	S.N. Dimova, I.G. Hristov Numerical investigation of the dynamics of fluxon lattices in long Josephson stacks	71
18.15 – 18.30	B.Z. Belashev, A.V. Kabelev Global optimization algorithms for data analysis	48
19.00	<i>Welcome party (ICH)</i>	

Monday, 8.07**Section 2***Mathematical methods and software for experimental data processing***LIT Conference Hall**

15.00 – 15.15	A. Kalachov, G. Krusanov Use of GEANT4 in brachytherapy	95
15.15 – 15.30	K.V. Gertsenberger Development of the distributed computing system for the MPD experiment at the NICA collider, analytical estimations	84
15.30 – 15.45	V.P. Akishina, I.V. Kisel, I.S. Kulakov, M.V. Zyzak Cellular automaton track finder at high track multiplicities	25
15.45 – 16.00	T. Ablyazimov, M. Zyzak, V. Ivanov, P. Kisel A fast parallelized Kalman filter based reconstruction of charge particle trajectories for the CBM experiment on a manycore server at LIT JINR	21
15.00 – 15.15	V.B. Zlokazov, V.A. Morozov Robust fitting for the estimation of hidden parameters in the experimental distributions on the plane	192
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	S. Lebedev, A. Lebedev, C. Hoehne, G. Ososkov Selected event reconstruction algorithms for the CBM experiment at FAIR	124
16.45 – 17.00	S. Lebedev, A. Lebedev, F. Uhlig Quality assurance for simulation and reconstruction software in CBMROOT	123
17.00 – 17.15	G.E. Kozlov, V.V. Ivanov, A.A. Lebedev, I.O. Vassiliev Clustering data for coordinate detectors in the CBM experiment	107
17.15 – 17.30	O.Yu. Derenovskaya, V.V. Ivanov Algorithms for $J/\psi \rightarrow e^+e^-$ selection registered with CBM setup in $Au+Au$ collisions at 25 AGeV	69
17.30 – 17.45	S.A. Baginyan Application of the perfect match problem to the track-match problem	42
17.45 – 18.00	B.F. Kostenko, J. Pribis Signs of dibaryon detection in $D+D \rightarrow X+D$ reaction	104
18.00 – 18.15	A. Krafčík, P. Babinec Theoretical concept of integrated microfluidic system for magnetic cell separation, electroporation, and transfection	108
18.15 – 18.30	G. Musulmanbekov, A. Solovjev, T. Solovjeva Quark correlations and discrete symmetry of nuclear structure	136
18.30 – 18.30	I. Slepov The distributed monitoring system of a compute cluster and the state of the user tasks	171
19.00	<i>Welcome party (ICH)</i>	

Tuesday, 9.07

Plenary

09.00 – 09.30	O.V. Tarasov Generalized recurrence relations and dimensional recurrences for Feynman integrals	175
09.30 – 10.00	D.A. Slavnov Computer model of a qubit	171
10.00 – 10.30	I. Rogojin, A. Khvedelidze On the separability problem for quantum composite systems	160
10.30 – 11.00	V. Gerdt, A. Khvedelidze, Yu. Pali On the inequalities defining the entanglement space of 2-qubits	83
11.00 – 11.30	<i>Coffee</i>	
11.30 – 12.00	V.P. Gerdt, Yu.A. Blinkov Computer algebra aided numerical solving KdV-like PDEs	82
12.00 – 12.30	P.P. Fiziev Parallel computations using Maple 17	79
12.30 – 13.00	A. Aranson Solutions to nonlinear ODE's by means of power geometry algorithms	37
13.00 – 13.30	S.A. Abramov, D.E. Khmelnov, M.A. Barkatou On the width of full rank linear differential systems with power series coefficients	22
13.30 – 15.00	<i>LUNCH</i>	

Section 3

Computer algebra and quantum computing with applications

LIT Conference Hall

15.00 – 15.15	S.I. Serdyukova Solving the hysteresis loop calculation problem for Josephson junction stacks	167
15.15 – 15.30	A.I. Zobnin Anti-Frobenius algebras and quadratic Poisson brackets	193
15.30 – 15.45	V.V. Zhuravlev, S.A. Mikheev, V.P. Tsvetkov Approximation of polynomials on compact in R^3 polynomials of the best approximation in the L_2 lowest level in the system of symbolic mathematic MAPLE	191
15.45 – 16.00	V.V. Zhuravlev, S.A. Mikheev, V.P. Tsvetkov Critical points and points of a bifurcation of the rotating magnetized Newtonian polytropic with $0.9 \leq n \leq 1.6$ index	191
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	D.A. Yanovich Evaluation of parallel computations of Gröbner and involutive bases on the massive SMP computer	183
16.45 – 17.00	V.A. Sarychev, S.A. Gutnik Mathematical modeling of gyrostat satellite dynamics using methods of computer algebra systems	166
17.00 – 17.15	V. Rikhvitsky Evaluation of spinors in computer algebra	159

17.15 – 17.30	S.V. Paramonov Undecidability of existence of certain solutions of partial differential and difference equations	141
17.30 – 17.45	P.V. Fokin, Yu.A. Blinkov Application of ZDD diagrams for solving SAT problems	80
17.45 – 18.00	I. Dimovski, M. Spiridonova Operational calculus approach to explicit solving of initial and boundary value problems	72
18.00 – 18.15	S. Poryazov, E. Saranova, M. Spiridonova Modeling of telecommunication processes in an overall complex system	152
18.15 – 18.30	P. Burtyka, A. Trepacheva Searching automorphisms using computer algebra and its applications in coding theory	64
18.30 – 18.45	P. Burtyka, A. Trepacheva Mathematical and computer modeling of oil spill pollution in shallow water	63
18.45 – 19.00	A.A. Bogolubskaya, I.L. Bogolubsky On 2D and 3D localized solutions with nontrivial topology	57
19.00 – 19.15	M.I. Baranov A method of local improvements for lower bounds on valuations of solutions of linear difference systems with polynomial coefficients	44

Tuesday, 9.07

Section 1c

Mathematical methods and tools for modeling complex systems

Room 310

15.00 – 15.15	Yu.N. Pepelyshev, A.K. Popov, D. Sangaa, D. Sumkhuu Model of dynamics of the IBR-2M pulsed reactor for analysis of fast transients	143
15.15 – 15.30	A.V. Plenkin Localization of gas-dynamic fields singularities and adaptation of grid to singularities position	146
15.30 – 15.45	I.V. Amirkhanov, N.R. Sarker, I. Sarkhadov, Z.A. Sharipov, Z.K. Tukhliev, E.V. Zemlyanaya MPI algorithm realization for 3D-computation of phase transitions in materials irradiated by ions beams in frames of thermal spike model	26
15.45 – 16.00	A. Perepelkina, V. Levchenko, I. Goryachev 3D simulation of filamentation instability in laser interaction with overdense plasma with CFHall code	144
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	A. Glushkov Numerical energy approach and QED lines moments technique for finite Fermi-systems in a strong electromagnetic field	
16.45 – 17.00	E. Zemlyanaya, N. Alexeeva, P. Atanasova Complexes of localized states in ac-driven nonlinear Schrödinger equation and in double sine-Gordon equation	186
17.00 – 17.15	N.M. Ershov, A.V. Kravchuk Discrete modeling using stochastic cellular automata	77
17.15 – 17.30	K.S. Kolegov Non-steady mathematical model of fluid flow in a thin drop	102

17.30 – 17.45	M. Timko, M. Rajnak, P. Kopcansky, M. Kostelec, J. Kurimsky, A. Taculescu, L. Vekas, J. Kuchta Temperature map in power transformer: model and experimental data	176
17.45 – 18.00	A. Bouzid, N. Kheloufi Structural, electronic and optical properties of CdS _{1-x} Te _x ternary semiconductors	60

Tuesday, 9.07

Section 1d

Mathematical methods and tools for modeling complex systems

Room 407

15.00 – 15.15	Cs. Török Splines without diagonal matrices	177
15.15 – 15.30	R.M. Yamaleev, A. Rodrigues-Dominguez Solution of n -order Riccati equation and applications	183
15.30 – 15.45	L.A. Yanovich, M.V. Ignatenko Interpolation functional polynomials for nonlinear ordinary differential operators	184
15.45 – 16.00	Д.А. Зенюк, Ю.Н. Орлов Моделирование случайных блужданий на обобщенном множестве Кантора	188
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	T.N. Kупenova Smooth approximation of functions of two variables	121
16.45 – 17.00	S.A. Vasilyev Asymptotic solutions of boundary problems for singular perturbed infinite order differential equations	178
17.00 – 17.15	A. Rubchinsky Volatility in classifications	161
17.15 – 17.30	Eu. Shchetinin, P. Markov, P. Lyubin, V. Maksyutov Optimal regression model selection with least angle regression	169
17.30 – 17.45	S. Bolotova, S. Makhortov Using multi-threading in the relevant LP-inference method	58
17.45 – 18.00	T.Z. Ismagilov Second order finite volume scheme for Maxwell's equations with discontinuous dielectric permittivity on structured meshes	198

Wednesday, 10.07

Plenary

09.00 –09.30	A.G. Galstyan, Yu.V. Popov, O. Chuluunbaatar, B. Piraux Ionization dynamics of atoms exposed to strong laser pulse: semi-analytical model at low field frequencies	81
09.30 –10.00	V. Melezhik Resonances in ultracold collisions confined by atomic traps	128
10.00 –10.30	A. Nicolin Density waves in Bose-Einstein condensates	138
10.30 –11.00	R.G. Nazmitdinov, N.S. Simonovič Magnetic field and entanglement control in vertical two-electron quantum dots	137
11.00 –11.30	<i>Coffee</i>	
11.30 –12.00	V.I. Korobov Coulomb three-body problem and precision spectroscopy of light atoms and molecules	103
12.00– 12.30	M.V. Demina, N.A. Kudryashov Point vortices and nonlinear polynomials of the Sawada–Kotera and the Kaup–Kupershmidt equations	68
12.30 –13.00	L. Buimaga-Iarinca, C. Morari, Felix Farcas, Bot Adrian Challenges in computational nanotechnology: a case study	
13.00 –13.30	Yu.N. Karamzin, S.V. Polyakov, V.A. Fedirko Simulation of electron emission from nanostructure surfaces	96
13.30 –15.00	<i>LUNCH</i>	

Wednesday, 10.07

Section 1f

Mathematical methods and tools for modeling complex systems

Room 310

15.00 – 15.15	A. Degtyarev, I. Gankevich Hydrodynamic pressure computation under real sea surface on basis of autoregressive model of irregular waves	65
15.15 – 15.30	I.V. Amirkhanov, A.Yu. Didyk, I.V. Puzynin, T.P. Puzynina, N.R. Sarker, I. Sarkhadov, Z.A. Sharipov, Z.K. Tukhliev Modeling the track formation in amorphous iron alloys exposed to high-energy heavy ions	35
15.30 – 15.45	V.N. Robuk Analytical solutions of linear homogeneous thermal spike model	160
15.45 –16.00	E.A. Mesyats, A.V. Snytnikov Particle-in-cell simulation of kinetic instability of an electron beam in plasma	129
16.00 – 16.30	<i>Coffee</i>	

16.30 – 16.45	A. Ayriyan, E. Donets, J. Pribis Algorithms for mathematical modeling of thermal processes for design a technical device	39
16.45 – 17.00	E.A. Ayryan, A.A. Egorov, A.L. Sevastyanov, L.A. Sevastyanov Stable computer modeling of thin-film generalized waveguide Luneburg lens	40
17.00 – 17.15	B. Batgerel, E.G. Nikonov, I.V. Puzynin Simulation of interaction of a colliding nanoclusters beam with solid surface	47
17.15 – 17.30	N.A. Kudryashov, D.I. Sinelshchikov Extended evolution equations for nonlinear waves in liquid with gas bubbles	119
17.30 – 17.45	N.A. Kudryashov, M.B. Kochanov, D.I. Sinelshchikov Nonlinear waves on shallow water under an ice cover. Higher order expansions	118
17.45 – 18.00	N.A. Kudryashov, M.A. Chmykhov Mathematical modeling of heat frozen earth	117
18.00 – 18.15	N.A. Kudryashov, P.N. Ryabov, A.S. Zakharchenko Self-organization of adiabatic shear bands in cooper and steel	115

Wednesday, 10.07

Section 1g

Mathematical methods and tools for modeling complex systems

LIT Conference Hall

15.00 – 15.15	E.B. Fel'dman, E.I. Kuznetsova, M.A. Yurishchev Two-spin correlations in a system of nuclear spins $s=1/2$ in a nanopore in a strong magnetic field	78
15.15 – 15.30	A.S. Gevorkyan Modeling of 3D classical spin glasses under influence of external electromagnetic fields	85
15.30 – 15.45	A. Grishanin Numerical solution of time-independent Schrodinger equation for quantum dots	91
15.45 – 16.00	B.F. Kostenko The dynamical Casimir effect in two nucleon systems	105
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	T.I. Mikhailova, B. Erdemchimeg, A.G. Artyukh, Yu.M. Sereda, M. Di Toro, H.H. Wolter Description of peripheral heavy ion collisions at Fermi energies with transport theory	131
16.45 – 17.00	Kh.Kh. Muminov, F.Sh. Shokirov Dynamics of two-dimensional breathers in O(3) vectorial nonlinear sigma-model	135
17.00 – 17.15	Kh.Kh. Muminov, Sh.F. Muhamedova Chaotic dynamics of solitons in classical Heisenberg antiferromagnet model	134
17.15 – 17.30	B. Saha Anisotropic dark energy model with varying EoS parameter	163
17.30 – 17.45	M. Pudlak, R.G. Nazmitdinov Memory effects for fast electron transport in open systems: photosynthetic reaction centers	156
17.45 – 18.00	L.A. Sevastyanov, A.V. Gorbachev, A.V. Zorin Verification of Kuryshkin-Wodkiewicz mathematical model for quantum measurement	168

18.00 – 18.15	A.I. Zenchuk Propagation of information along the open spin-1/2 chains	187
18.15 – 18.30	Yu.P. Rybakov Structure of topological solitons in nonlinear spinor model	162

Wednesday, 10.07

Section 4

Distributed and parallel computing in science and technology

Room 407

15.00 – 15.15	I.V. Popov, I.V. Fryazinov Method of artificial viscosity on unstructured grids	150
15.15 – 15.30	V. Podryga, T. Kudryashova, S. Polyakov Parallel MD-simulation of gas mixture in microchannels	147
15.30 – 15.45	N.A. Likhoded, P.A. Mandrik, S.V. Bakhanovich Locality enhancement of parallel algorithms for numerical solution of quasi-linear two-dimensional parabolic equations	125
15.45 – 16.00	O.I. Streltsova, M.A. Matveyev, A.I. Streltsov Multi-configurational time-dependent Hartree for bosons method: efficiency of the hybrid MPI&CUDA parallelization schemes	174
16.00 – 16.30	<i>Coffee</i>	
16.30 – 16.45	M.A. Boronina, V.A. Vshivkov, V.D. Korneev Parallel 3D PIC code for the numerical simulations of ultrarelativistic charged beams in supercolliders	59
16.45 – 17.00	S. Mitsyn, G. Ososkov Watershed on vector quantization for clustering of big data	134
17.00 – 17.15	A. Vorotyntsev About workgraphs, typical for representation of computable models in the network library	181
17.15 – 17.30	P.V. Pavlukhin Parallel LU-SGS numerical method implementation for 3-dimensional gas dynamics problems on GPU-accelerated computer systems	142
17.30 – 17.45	A.A. Gusev, O. Chuluunbaatar, S.I. Vinitzky, A.G. Abrashkevich POTHEA: a program for computing effective potentials, energy levels and wave functions in the coupled-channel hyperspherical adiabatic approach	94
17.45 – 18.00	A.A. Gusev, O. Chuluunbaatar, S.I. Vinitzky, A.G. Abrashkevich KANTBP 3.0: New version of a program for computing energy levels, reflection and transmission matrices, and corresponding wave functions in the coupled-channel adiabatic approach	93
18.00 – 18.15	A.A. Bulychev, O. Chuluunbaatar, A.A. Gusev, B.B. Joulakian Parallelized procedure for the determination of the fully differential cross section for $(\gamma, 2e)$ photo-double ionization of N_2 molecule	61
18.15 – 18.30	A.V. Bogdanov, V.V. Mareev, V.Y. Gayduchok, M. Panchenko Modeling of the behavior of European options in the cloud computing system	54

18.30 –18.45	<p>E.I. Alexandrov, I.V. Amirkhanov, V.V. Ivanov, D.V. Podgainy, N.R. Sarker, I. Sarkhadov, Z.A. Sharipov, O.I. Streltsova, Z.K. Tukhliev, E.V. Zemlyanaya, P.V. Zrelov, M.I. Zuev</p> <p>Modeling of thermal processes in materials irradiated with heavy ion beams with the use of parallel algorithms on HPC complexes</p>	28
18.45 –19.00	<p>E.I. Alexandrov, I.V. Amirkhanov, V.V. Ivanov, D.V. Podgainy, N.R. Sarker, I. Sarkhadov, Z.A. Sharipov, O.I. Streltsova, Z.K. Tukhliev, E.V. Zemlyanaya, P.V. Zrelov, M.I. Zuev</p> <p>A new software complex for modeling thermophysical processes in materials irradiated with heavy ion beams on HPC systems</p>	29

Thursday 11.07
Plenary

09.00 –09.30	S. Budnyam Open geoinformation internet system for air pollution modeling	60
09.30 –10.00	N.D. Dikumar Piecewise approximation and smoothing by high degree polynomials using the basic element method	70
10.00 –10.30	I. Bakholdin Methods of numerical analysis for reversible shocks in media with complex dispersion	43
10.30 –11.00	S.I. Bezrodnykh, V.I. Vlasov The inverse problem for the Grad - Shafranov equation with application to magnetic field computation in tokamak	50
11.00 –11.30	<i>Coffee</i>	
11.30 –12.00	Y. Efendiev, J. Galvis, R.Lazarov Numerical simulation of flows in highly heterogeneous porous media	74
12.00– 12.30	T. Zhanlav, V. Ulziibayar Higher-order accurate numerical solution of Burgers' equation	190
12.30– 13.00	O.A. Mornev Nilpotents in the Clifford algebra of Euclidean 3-space and their intensional sense	196
13.00-14.00	<i>Poster session</i>	
15.00	<i>Boat trip</i>	

P.G. Akishin, A.A. Sapozhnikov The volume integral equations method in magnetostatics problems	24
N. Makhaldiani Hamiltonization of the dynamical systems and the theory of quanputers	125
I.R. Rahmonov, Yu.M.Shukrinov, A.E.Botha Modeling of phase dynamics of two parallel Josephson junctions stacks	197
S.V. Poluyan, N.M. Reinhard, N.M. Ershov Self-adaptation in swarm optimization algorithms	148
V.A. Kubyshkin, S.S. Postnov The optimal control problem for linear dynamical systems of fractional order	111
A. Kravchuk, A. Stadnik Analysis of the efficiency of classifiers based on ADABOOST algorithm	109
L.H. Khiem, T.D. Trong A software for simulation of efficiency of HPGe detectors	101
O.A. Kazakov Multioperator models	99
A. Bobok Extremal dynamics of the system of three coupled singularly perturbed equations with two delays	53
D. Arslanova, A. Belov, V. Belyakov, I. Gornikel, V. Kalinin, M. Kaparkova, V. Kukhtin, N. Shatil, S. Sychevsky, V. Vasiliev Modelling of superfluid helium in forced-flow cooling circuits with VENECIA code	38
V. Amoskov, V. Belyakov, Yu. Gribov, E. Lamzin, N. Maximenkova, S. Sytchevsky Optimization of currents in ITER correction coils	36
I.V. Amirkhanov, T.P. Puzynina, I.V. Puzynin, I. Sarkhadov P.N. Vabishchevich, M. Pavlus Scheme of splitting with respect to physical processes for a model of heat and moisture transfer	34
I.V. Amirkhanov, G.A. Karamysheva, I.N. Kiyan, J. Sulikowski Mathematical modeling of beam dynamics for estimation of operating modes of isochronous cyclotron	33
I.V. Amirkhanov, N.R. Sarker, I. Sarkhadov, Z.A. Sharipov, Z.K. Tukhliev Investigation of solutions of quasistationary states for the quasipotential equation	32
A. Alekseev, Z. Andreeva, A. Belov, V. Belyakov, D. Campbell, E. Gaponok, Yu. Gribov, M. Hohlov, K. Ioki, V. Kukhtin, A. Labusov, E. Lamzin, B. Lyublin, A. Malkov, I. Mazul, M. Merola, I. Rodin, M. Sugihara, S. Sychevsky Simulation of eddy current and electromagnetic loads in ITER conducting structures	29
L.H. Khiem, T.D. Trong Monte Carlo simulation of gamma scattering for density variation measurement	100
A.V. Glushkov, S.V. Brusentseva, V.B. Ternovsky, P.A. Zaichko Geometry of a Chaos: New numerical techniques for treating a deterministic chaos in complex quantum generator, geo-and biophysical systems	
O. Yu. Khetselius Nuclear-QED perturbation theory and Green's function approach to electroweak interaction effect in heavy finite fermi systems: Numerical calculation	
A.S. Kvasikova Numerical simulation of the hydrogen and kaonic hydrogen atoms in the crossed electric and magnetic fields	
A.A. Svinarenko Quantum computing autoionization resonances in spectra of heavy atomic systems	
Yu.Ya. Bunyakova Nonlinear prediction method in short-range forecast of atmospheric pollutants: Numerical search of a low-dimensional chaos	

V.V. Buyadzhi Many-electron atoms and ions in a one- and two-color laser fields with account of the Debye plasma effects: Quantum computing	
P. Kuchugov Simulation of the gravitational mixing on GPU	112
S. Mitsyn, G. Musulmanbekov, G. Ososkov, A. Polanski, T. Mikhailova Application of clustering approach in the UrQMD fragmentation model for nuclear collision for relativistic energies	133
И.А. Маркова Обобщение методов аппроксимации наборов дискретных данных	

Friday, 12.07
Plenary

09.00 –09.30	V.N. Razzhevaikin Evolutionary optimality in structured systems and its applications in medical and biological problems	157
09.30 –10.00	V.D. Lakhno Mathematical modeling of charge dynamics in molecular chains	121
10.00 –10.30	R.R. Aliev, R.A. Syunyaev Computer simulation of electrical activity in the sinoatrial node	30
10.30 –11.00	A.V. Dzyabchenko Methods and tools for organic crystal structure prediction	73
11.00 –11.30	O.A. Mornev Reaction diffusion systems, autowaves, and their physics	195
11.30 –12.00	<i>Coffee</i>	

Friday, 12.07
Section 5

Computational biophysics and chemistry, bioinformatics
Room 407

12.00 –12.15	O. Strbak, A. Krafcik, I. Frollo, P. Kopcansky Simulation of the IRON OXIDES complexes magnetic field parameters for the bio-medical applications	172
12.15– 12.30	S. Glyzin Relaxation self-oscillations in circular chains of unidirectionally coupled Hopfield neurons	87
12.30 –12.45	D. Baranov, G. Ososkov, A. Baranov Comparative study of cluster and neural network methods in the problem of protein structure analysis	45
12.45–13.00	I. Vodolazskaya, A. Shishkina, V. Dyakova, Yu. Tarasevich Modeling of surface patterning arising from the nonuniform evaporation of a colloidal film or droplet	178
13.00 –13.15	T. Kozar Computational studies of glycan-protein interactions	106
13.15 –13.30	E. Zhabitskaya, E. Zemlyanaya, M Kiselev Unilamellar vesicles structure analysis using parallel Asynchronous Differential Evolution	189
13.30 –13.45	T.I. Grokhlina, V.S. Sivozhelezov, R.V. Polozov, V.V. Ivanov Identifying protein-DNA recognition rules using a database of amino acid-nucleotide contacts in protein-DNA complexes	92
13.45 –14.00	S.A. Pozdneev Simulation of the scattering hydrogen halide molecules by slow electron	155
14.00 – 14.15	S.A. Pozdneev Few-body simulation in atomic and molecular physics	153
14.15 –14.30	A. Volokhova, E. Zemlyanaya, V. Lakhno, I. Amir Khanov, I. Puzynin, T. Puzynina Numerical simulation of the hydrated electron formation	180

14.30 –14.45	A. Medvinsky Population dynamics: limits of predictability	127
14.45	<i>Closing</i>	

Friday, 12.07

Section 1h

Mathematical methods and tools for modeling complex systems

LIT Conference Hall

12.00 –12.15	E.E. Perepelkin, R.V. Polyakova, I.P. Yudin Simulations of magnetostatic problems with an "angular point" in ferromagnetic region	143
12.15– 12.30	O.E. Shishanin Application of the Fourier series for particle dynamics simulation in the periodic magnetic fields	170
12.30 –12.45	N.I. Yakunkin, S.B. Medvedev, I.V. Schwab Transient processes in the plasma flow in a diverging magnetic field	182
12.45–13.00	G.V. Sandrakov, S.B. Boyko Modeling of hydrodynamics processes with phase transitions	164
13.00 –13.15	А.Н. Кудинов, Е.В. Чусова Оценка устойчивости уровня психической реакции человека информационном воздействии на него	113
13.15 –13.30	A.N. Kudinov, V.P. Tsvetkov, I.V. Tsvetkov Multifractal dynamics and mathematical modelling of natural, social and economic processes	114
13.30 –13.45	А.Н. Кудинов, Е.В. Чусова Применение метода сопряженных уравнений к процессу потери устойчивости при действии подвижных нагрузок	114
13.45 –14.00	A.N. Kudinov, V.P. Tsvetkov, I.V. Tsvetkov Waves of fractal dimension of global temperature of Earth, world economic crises and Kondratyev's cycles	115
14.00 – 14.15	K.M. Burceva, N.P. Khayrulina, V.P. Tsvetkov Analysis of a piecewise linear trend of average surface temperature of the Northern Hemisphere of Earth in the 2 nd and the beginning of the 3 rd Millennium in the mathematical model of multifractaldynamics	62
14.15 –14.30	D.S. Kulyabov Geometrization of electromagnetic waves	120
14.45	<i>Closing</i>
